6:30 PM - 8:00 PM

## "Eating Well to Prevent and Manage Secondary Conditions in SCI"

Despite the prevalence, awareness, and negative impacts of secondary health conditions associated with SCI (such as pressure sores, pain, bladder infections, etc.), there is limited information available for consumers focusing on the impact of nutrition on preventing and managing secondary conditions.

### Webcast attendees will be able to:

- Understand the therapeutic role nutrition plays in the rehabilitation and long-term health of individuals with SCI, and how nutrition can positively impact your independence in an easy, practical, and cost effective way.
- Learn about the importance of nutritional supplementation.
- Learn about the specific nutrients that can help prevent, manage, and address bowel dysfunction and pressure sores.
