

New perspectives on women's
health and spinal cord injury:

Addressing unique challenges and advancing care

Join us for a webinar exploring the intersection of spinal cord injury (SCI) and women's health, with a focus on the unique biological, psychosocial, and reproductive considerations affecting women living with SCI.

Presenters include a physician specializing in SCI and a woman who has lived with SCI for 27 years, offering both clinical and lived experience perspectives. The session will highlight the current state of research, clinical best practices, gaps in knowledge, and ongoing advocacy efforts.

Topics covered include:

- Reproductive and sexual health after SCI
- Pregnancy and parenting experiences
- Bone, bladder, and cardiovascular health
- Mental health, identity, and community reintegration
- Barriers to accessing healthcare
- Health maintenance and well-being

The webinar will conclude with a Q&A session.

Intended audience: Rehabilitation and healthcare professionals, individuals living with SCI, and advocates committed to advancing equitable, comprehensive care for women with SCI.

**Tuesday,
December 2, 2025
6 p.m. to 7 p.m.**
